(ENGLISH)MCQ

Direction for questions (41-50):

Read the following passage carefully and choose the correct answer from the four options given below based on the passage.

Passage-1

When she entered medical school in Hiroshima, Komaki was taught that surgery was the only viable cancer cure. But in the 1970s—while doing her externship, internship, residency and fellowship in Milwaukee—she began learning “how radiation could cure people, and that gave it a different meaning to me than just the atomic bomb,” she says. She came to view localized radiation treatment as less harmful than chemotherapy, and realized that it could not be equated at all with the scattered, uncontrolled radiation to the whole body that comes with exposure to an atomic bomb. In 1985, she and Cox went to Columbia Presbyterian Medical center in New York to work with Dr. Eric Hall, then a leading international authority on the effects of the atomic bomb on humans. In 1988, she began putting her years of research to work at UT M.D. Anderson.

Though protons were discovered by Ernest Rutherford in 1919, proton therapy didn't commence until 1954, at Berkeley nuclear physics labs. The Harvard Cyclotron Laboratory partnered with Massachusetts General Hospital to begin treating cancer patients in 1961. But the necessary technology is so expensive that treatment remained confined to physics research labs until 1990. That's when the Proton Treatment Center opened at Loma Linda University Medical Center in southern California to offer the first hospital-based program.

- a) It was very costly.
  - b) It was not suitable for human beings.
  - c) It was still under research.
  - d) There was no Proton Treatment Center.

Passage-2

Roosevelt was determined not to let this major illness get the best of him. He not only continued his illustrious political career, resulting in his well-documented and long term Presidency of the United States, but he went on to spearhead the fight against polio, increasing public awareness of the deadly disease and promoting research. Although polio never devastated large numbers of the

population like the plague or influenza, it was frightening, highly contagious disease that attacked both the poor and rich and arose in terrifying outbreaks which seemed impossible to stop in spite of advances in medicines.

Through the first half of this century, basic hygiene methods and knowledge had advanced tremendously. For the first time in civilization, people came to expect good health instead of merely opting for it. But, polio still attacked, and children were the most vulnerable. Many can remember seeing, in the early 1950s, heartbreaking posters of children on crutches or in iron lungs, the cumbersome mechanical aids which helped those whose lungs were paralyzed to breathe. Lacking vaccine, parents throughout the country panicked, keeping their children from schools and other public facilities.

81. Write a precis of the following passage in about 70 words giving a suitable title.

Trees give shade for the benefit of others, and while they themselves stand in the sun and endure the scorching heat, they produce the fruit of which others profit. The character of good men is like that of trees. What is the use of this perishable body if no use is made of it for the benefit of mankind? Sandalwood, the more it is rubbed, the more scent does it yield. Sugarcane, the more it is peeled and cut up into pieces, the more juice does it produce. The men who are noble at heart do not lose their qualities even in losing their lives. What matters whether men praise them or not? What difference does it make whether they die at this moment or whether lives are prolonged? Happen what may, those who tread in the right path will not set foot in any other. Life itself is unprofitable to a man who does not live for others. To live for the mere sake of living one's life is to live the life of dogs and crows. Those who lay down their lives for the sake of others will assuredly dwell forever in a world of bliss.

84. ଓଡ଼ିଆରେ ଅନୁବାଦ କର ।

Most of the children of the village had seen planes flying overhead, but none of them had seen a ship, and only a few had been in a train. Their village was far from the railway and hundreds of miles from the sea. But they all knew about the big dam that was being built just forty miles away from their village. So they decided to visit the dam site and requested their favourite teacher to take them to see the dam which was under construction.
